Skills

- Detail Oriented
- Design Thinking
- Problem solving
- Punctual

Tools

- Word, Excel, Visual Studio, Unity, FileZilla, IntelliJ, SQL Workbench, Docker, GitHub, AWS S3, AWS CodeCommit, Zendesk

Coding languages

- Java , HTML, C# , C++, CSS PHP, JS, JQuery, mySQL, SQL

EDUCATION

UNIVERSITY OF ULSTER COLERAINE

2:2 Degree in BSC (Honours)
Computing with Games
Development
2013 - 2017

BALLYCLARE SECONDARY SCHOOL

A Levels (2013):

History (C), Technology & Design (C),
BTEC Level 3 in Engineering (Merit)

GCSEs (2011):

English (C), English Literature (D),
Mathematics (B), Science (C),
Additional Science (C), ICT (A),
Technology & Design (B)

2006 - 2013

SUMMARY

Web developer with over a year and a half experience in developing and updating web platforms both in terms of looks and functionality. Who is looking to expand and develop existing and new skills in a practical environment. Team player with strong creative and analytical skills as well as an eye for detail.

Work Experience

Zymplify

Junior Web Developer

APRIL 2024 - OCTOBER 2024

- Worked as part of a team to update and implement new functionality on multiple platforms using programming languages such as php, css, ajax, jquery and js. This including optimisations and features such as round-robin, allowing for better efficiency.
- Made database changes including creating new tables and used insert, update and select data using sql and mysql. An example of which was when I was implementing a round-robin for form biased candidates. This required a new table to be made and one modified.
- When round-robin was applied to the list sections, some of which contained thousands of names, I managed to cut the processing time significantly by almost three quarters of the time by using background processing.
- Used a local server program called docker for code development.
- Used git for branch creation and switching branches.
- Used a local server program called docker for code development.

WE ARE LANDED

2023 - APRIL 2024

Junior Web Developer

- Worked as part of a team to update and implement new functionality on multiple platforms using programming languages such as PHP, CSS, ajax, jquery and js. This included optimisation and new features such as code generated auto reports, tailored to client needs.
- Made database changes including creating new tables and used insert, update and select data using sql and mysql. This was most evident during the auto reports as new tables were made and data was being left joined using mysql. Overall making clients jobs easier.
- Worked as part of a team to update platform to use bootstrap 5. This allowed for optimisation in old areas and improved the look and quality of the site
- Worked on bug fixes and online support using zendesk, thanks to customer interactions, this led to the bugs and errors fixed quickly. Something praised by customers.
- Used AWS code commit when code ready for review.
- Used git for branch creation and switching branches.
- Used a local server program called docker for code development.

SAINSBURYS

2020 - 2023

Online Shopping Assistant

- Working as part of a team going around store collecting products ordered by customers online.
- Working as part of a team help the General Assistants to load the vans with online orders.
- Working as part of a team organise and restock shelves.

INTERESTS

- 3D printing
- Computer gaming and board games
- Discussing movie, tv shows, games and book lore
- Computer games design
- Model Making - including painting and kitbashing.
- Listening to Audiobooks
- Watching movies and tv shows
